

FINDING CHILDREN WHO NEED HELP FIRST

Child Protection Demands Better Prioritization

Child protection teams are facing growing volumes of referrals, reports, digital evidence, and investigative information.

In 2025 alone, NCMEC received more than [21.3 million](#) CyberTipline reports, highlighting the scale of the challenge facing child protection teams worldwide.

For child protection teams, the challenge is no longer collecting information but determining where to focus first.

Every referral deserves attention. Not every referral carries the same level of risk.

Successful intervention depends on identifying vulnerable children sooner, uncovering critical connections faster, and directing limited investigative resources where they can have the greatest impact.

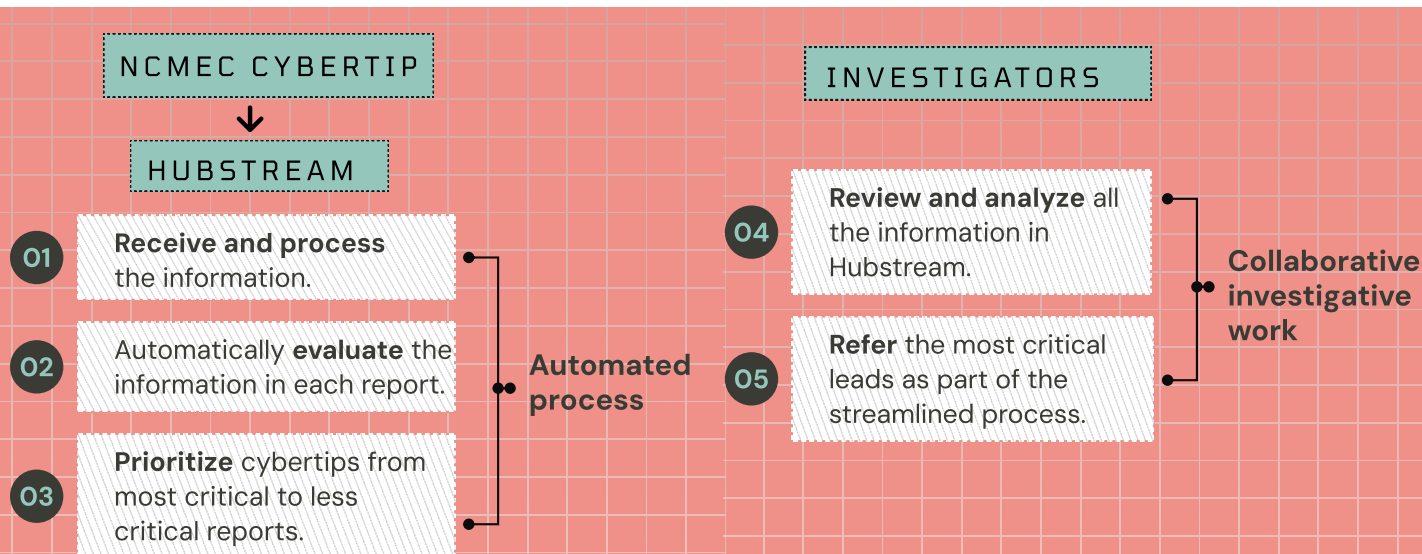

To Intervene Faster, Teams Need To:

- Identify high-risk referrals sooner
- Connect related reports automatically
- Detect repeat offenders and recurring patterns
- Reduce time spent gathering information
- Let investigators focus on assessment and intervention than administrative burdens
- Identify vulnerable children and victims sooner

From Referral Volume to Investigative Focus

Hubstream helps teams prioritize referrals, identify vulnerable children sooner, connect investigations, and reduce investigative overhead.

Hubstream Workflow Example: NCMEC Cybertips

Being able to prioritize lets you put your resources into the right cases from the beginning, which means you safeguard children quicker. Everyone wins.

— Olle Ejerblad, Law Enforcement Liaison, Griffeye

Human Expertise. Amplified.

Hubstream does not replace investigative judgment. Instead, its role is to help investigators spend less time sorting through information and more time focusing on the referrals that matter most.

Hubstream Key Capabilities

AI-Assisted Prioritization

Automatically assess incoming referrals using agency-defined indicators and investigative criteria.

Relationship Discovery

Identify connections between people, devices, accounts, locations, incidents, and historical investigations.

Unified Intelligence

Combine cybertips, investigative records, intelligence, and digital evidence into a single investigative environment.

AI Investigation Assistant

Classify leads, surface contradictions, summarize information, organize evidence, draft reports, and reduce routine administrative workload.

Configurable Investigative Workflows

Adapt workflows, forms, risk models, and operational processes to the unique needs of child protection teams.

Hubstream Strength: Built for the Reality of Child Protection

No two child protection teams operate the same way.

Hubstream is designed to support those operational realities. Agencies can accelerate deployment using proven child protection templates to expedite implementation while tailoring workflows, forms, prioritization models, and investigative processes to their specific requirements.

From onboarding through long-term success, Hubstream provides hands-on, white-glove support to help teams realize value quickly while minimizing disruption to daily operations.

Our Commitment to Child Protection

In 2025, Hubstream launched the Child Protection Center of Excellence (CPCoE) to help child protection teams advance triage, prioritization, investigative workflows, and operational best practices.

Working alongside practitioners and partners such as Griffeye, our goal is simple: Help child protection teams identify risk sooner, reduce investigative burden, and improve outcomes for vulnerable children.

Proven at Global Scale

[Project VIC](#), collaborates with law enforcement agencies worldwide to advance victim identification and combat child sexual exploitation. Together, Project VIC and Hubstream help investigators connect information, prioritize leads, and coordinate investigations more effectively, enabling agencies to identify victims and safeguard children faster.
